BLOKCAM ACCESSORIES

BlokCam Office Link (OL1) PART 7370015

The Crosby BlokCam Office Link enables video and data from the BlokCam system to be received and monitored from a site office. By connecting the Office Link to a host computer, users can view, record, and download footage from one or multiple BlokCam systems for site monitoring and surveillance.

The system is quick to install and designed for outdoor environments, featuring an integrated antenna and rugged mounting bracket to ensure reliable performance on construction sites. It also allows users to capture screenshots and extract footage for training, incident investigation, or operational review..

4G Router PART 7350026

The Crosby BlokCam 4G Router is designed to enhance the connectivity and accessibility of the BlokCam system. By integrating a 4G router with the system, users can securely connect the camera network to the internet, enabling remote viewing and data access from virtually anywhere.

When installed, the router allows live video feeds from the BlokCam system to be streamed over a mobile data network, giving off-site personnel the ability to monitor operations in real time. This is particularly useful for project managers, safety teams, or site supervisors who need visibility of crane activity without being physically present.

In addition to live monitoring, the 4G connection enables remote retrieval of recorded footage from the BlokCam system. This makes it easier to review lifts, investigate incidents, support training, or maintain operational records without needing direct access to the crane installation.

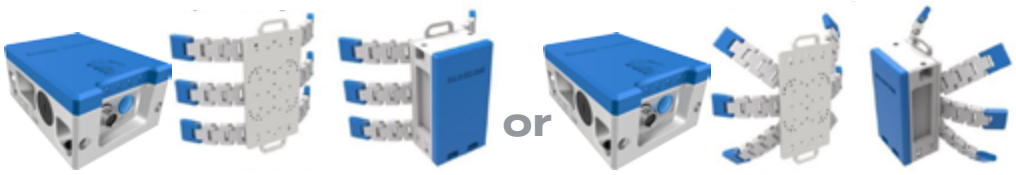
V-Cam (VC5a) PART 7370049

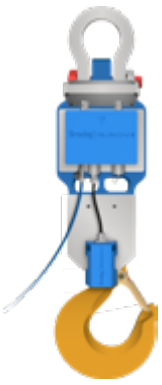
The V-Cam (VC5a) is a compact hardwired camera designed to expand the capabilities of the BlokCam X4 system by adding additional monitoring points around the crane. Built with durability in mind, its robust construction, compact size, and versatile mounting options allow it to be installed quickly in a wide range of applications.

Ideal for monitoring and recording key crane components such as the hoist drum, luffing drum, slew ring, tail swing, and the operator's cab, the V-Cam provides clear video for operational awareness and data logging. The integrated microphone also captures audio, making it particularly effective for audio-visual monitoring when installed inside the operator's cab.
Compatible with X4 systems only.

BlokMag (BM1) PART 7370009

Attach your crane camera system to a hook block with a curved surface. Flat, spherical, cylindrical, narrow, short or tall, our modular BlokMag system allows flat surfaces to magnetically mate with curved surfaces flawlessly.





BlokLink PART 7370031

Complete with hook and bow, attach your crane camera system to a crane where you cannot if the block has a curved surface. Flat, spherical, cylindrical, narrow, short or tall, our BlokLink is the solution to provide a flat surface for your BlokCam or BlokAlert.
